

Sennheiser esittelee 1-kanavaisen Profile Wireless -mikrofonin ja julkaisee 32-bittisen float-laiteohjelmistopäivityksen, joka helpottaa äänen hallintaa

Itsenäisille sisällöntuottajille suunnattua järjestelmää on mahdollista päivittää myöhemmin

Helsinki, 14. toukokuuta 2025 – Sennheiser julkisti tänään 1-kanavaisen version Profile Wireless 2.4 GHz -all-in-one-mikrofoniratkaisustaan. Virtaviivainen yhden mikrofonin järjestelmä toimitetaan kompaktissa laukussa, ja se sisältää toisen USB-latauskaapelin vuoden 2024 lopulla julkaistun 2-kanavaisen version lataustangon sijaan. Kevyeksi ja erittäin helposti mukana kuljetettavaksi suunniteltu 1-kanavainen versio kattaa yksin toimivien sisällöntuottajien tyypilliset käyttötilanteet. Järjestelmää on kuitenkin mahdollista laajentaa myöhemmin, sillä se sisältää saman 2-kanavaisen vastaanottimen kuin 2-kanavainen Profile Wireless -järjestelmä. Lisäksi 32-bittinen äänen hallintaa helpottava float-laiteohjelmistopäivitys kaikkiin Profile Wireless -järjestelmiin on ladattavissa Sennheiserin verkkosivuilta tästä päivästä alkaen.

Lisää alla englanniksi.

The Profile Wireless 1-channel mic system includes a clip-on mic with mini windshield and magnetic mount, a two-channel receiver, two USB cables, USB-C and Lightning adapters, a camera cable and a shoe mount adapter

Streamlined one-channel version

“Following the huge success of the Profile Wireless 2-channel system, we’re now catering to the solo creator, who does not require the full two-channel package but would rather like to save on weight and cost and still have Sennheiser audio quality,” says Hendrik Millauer, Product Manager Broadcast & Film at Sennheiser. “Profile Wireless 1-channel is also ideal for the casual user looking for a wireless mic to hook up to their laptop, for example.”

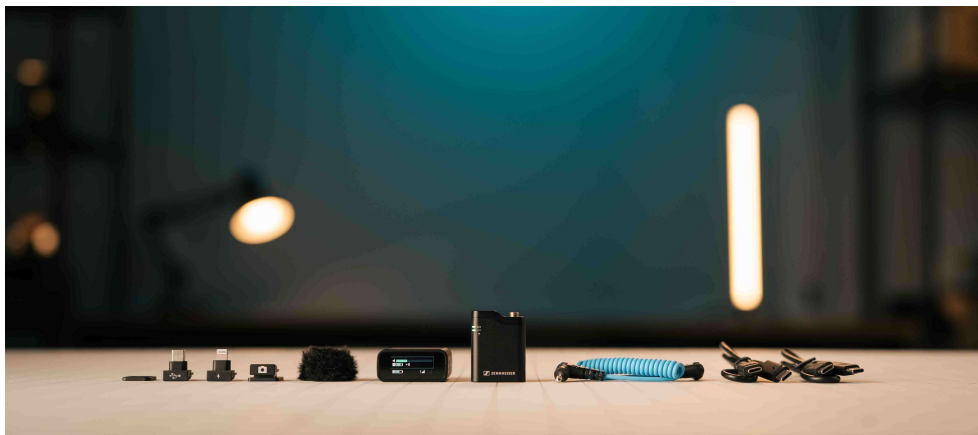

Profile Wireless 1-channel is also an ideal solution for users looking for a wireless mic for their laptop

Just like the two-channel version, the solo system is quick and easy to set up – no app required. It can be used on cameras, with smartphones and computers, and can be combined with an external lavalier microphone or even used to create a wireless boom. The mic has an operating time of up to seven hours, and 16 GB of memory for up to 30 hours of internal recording.

Profile Wireless can also be used to create a wireless boom, here in combination with an MKE 400 mini-shotgun mic

The Profile Wireless 1-channel mic system comes in a rugged pouch that includes the clip-on microphone with mini windshield and magnetic mount, a two-channel receiver, two USB cables, USB-C and Lightning adapters, a camera cable and a shoe mount adapter. As all Profile Wireless components can also be bought separately, nothing stands in the way of expanding the system to two channels at a later point in time.

32-bit float update for Profile Wireless

“With the latest Profile Wireless firmware update, we’re addressing user requests for a 32-bit float functionality,” says Millauer. “This will allow creators to record with extremely high dynamic range, and help them to recover clipped audio.”

For 32-bit float recording, Profile Wireless combines the audio signals of the two A/D converters inside the Profile Wireless mics to create a single 32-bit float audio stream.

Creators who prefer 24-bit recording due to its lower memory requirement still have the option to deactivate 32-bit float recording and turn on the Safety Channel Mode. This will output a -6dB version of the audio in addition to the original sound level and thus help protect against clipping.

To update their Profile Wireless system to firmware version V4.1.0, creators are asked to visit www.sennheiser.com/profilewireless. Under Downloads, they will find various firmware updates for Mac and PC, with a smart tool guiding them through the update process for the receiver and transmitter(s). Please note that the first batches of the Profile Wireless 1-channel mic also need to be updated to firmware version V4.1.0.

Millauer concludes, “With the addition of the one-channel system and 32-bit float recording, Profile Wireless becomes the most versatile tool for creators who value excellent sound and see it as a key differentiator for quality content.”

The Profile Wireless 1-channel mic is available from today and retails at EUR 199 (MSRP), USD 199 (MAP), or GBP 169 (MSRP).
