

Table of Contents

1. Sustainable Energy Systems in a Changing World – An Introduction	1
1.1 Sustainable living between ecological ceiling and social foundation	7
1.2 From industrialization to green energy transition	15
1.3 Potentials and challenges of variable renewable energy technologies	19
1.4 Competence profile of a game-changing engineer	23
1.5 How to use the book effectively?	28
References	29
 2. A Sustainable Path for Renewable Energy Technologies	 33
2.1 Introduction	33
2.2 Climate change and the impacts of anthropogenic carbon emissions on nature and society	35
2.2.1 Earth's energy balance and greenhouse effect	38
2.2.2 Finite fossil energy resources and carbon budget	41
2.2.3 Carbon emissions and carbon cycles	44
2.2.4 Connection between total emissions, population, GDP, energy intensity and energy sources	50
2.2.5 Conclusions	57
2.3 Biodiversity loss	58
2.3.1 What is biodiversity?	58
2.3.2 How to measure biodiversity?	58
2.3.3 State of nature and drivers of biodiversity loss	61
2.3.4 Value of biodiversity	63
2.3.5 Assessing biodiversity footprints in different context	63
2.3.6 Biodiversity footprint indicators	67
2.3.7 Conclusions	72
2.4 Renewable energy and land-use change	73
2.4.1 Solar power systems and land use change	77
2.4.2 Wind power and land-use change	78
2.4.3 Bioenergy and land use change	80
2.4.4 Hydropower and land use change	81
2.4.5 Conclusions	82
2.5 Societal impacts of renewable energy	84
2.5.1. Social sustainability of energy systems	85
2.5.2 Energy consumption's contribution to welfare	87
2.5.3 Societal benefits and challenges of renewable energy technologies	90
2.5.4 Economic and political power in energy decision-making	92
2.5.5 Social engagement of citizens in energy systems	95
2.5.6. Social participation as a key to a successful energy project	97
2.6 Economics of renewable energy	100
2.6.1 How investments are assessed	100
2.6.2 Methods for assessing profitability of an investment	102
2.6.3 Evaluating the investment cost	109
2.6.4 Internalizing externalities and financial policy support mechanisms	113
2.6.5 Financing the energy investments	117
2.7 A sustainable path for renewable energy technologies – Summary	119
References	120
 3. Thermal Power Plant Technologies for Renewable Sources	 135
3.1 Mass and energy balances of an open flow system	137
3.2 Principles of thermal power plants	147

3.3 The basic Rankine cycle steam power plant and its components	150
3.4 Improvement options for the basic Rankine cycle	161
3.5 Principles of gas turbine processes	173
3.6 Intercooling and regenerative pre-heating	180
3.7 Ericsson and Stirling cycles	186
3.8 Introduction to combined power plants	192
3.9 Combined heat and power production	203
3.10 Concentrated solar power plants	210
3.10.1 CSP technologies	211
3.10.2 Solar tower power system with molten salt	213
3.11. Geothermal power plants	219
3.11.1 Dry steam system	222
3.11.2 The flash geothermal powerplants	223
3.11.3 Binary geothermal power plants	226
3.11.4 Hybrid configurations	227
3.12. Heat pumps	228
3.12.1 Heat pump types and applications	229
3.12.2 Working fluids	230
3.12.3 Carnot refrigeration and heat pump cycle	232
3.12.4 Single-stage heat pump	235
3.12.5 Two-stage heat pump	239
3.13 Environmental impacts of thermal power plants and their mitigation	242
3.13.1 Concentrated solar power plants	242
3.13.2 Geothermal power plants	244
3.14 Summary	247
References	248
4. Solar Energy	275
4.1 Introduction	275
4.2 Solar resource analysis	278
4.2.1 Sun-Earth geometry	280
4.2.2 Attenuation in the atmosphere	286
4.2.3 Impact of collector orientation	290
4.2.4 Modeling the transient solar resource	291
4.2.5 Panel geometrical efficiency and shading in grid arrangement	295
4.3 Principles of solar photovoltaic panels	298
4.3.1 The silicon solar cell and its equivalent circuit	299
4.3.2 Limits for the PV panel efficiency	308
4.3.3 Additional loss effects	303
4.4 Design of a PV power plant	315
4.4.1 Stand-alone, battery-coupled PV systems	316
4.4.2 Industrial large-scale PV systems	319
4.4.3 Identification of sites for PV production	321
4.5 Brief overview of solar cell technologies	325
4.5.1 Halide perovskite solar cells	328
4.5.2 Summary and outlook	334
4.6 Material aspects of solar PV panels	334
4.6.1 Circularity of material and their environmental impact	336
4.7 Impacts on nature and mitigation of negative effects	340
4.7.1 Impacts of ground-mounted solar PV power plants on nature	341
4.7.2 Avoiding and mitigating negative impacts on nature in ground-mounted solar PV power plants	347
4.7.3 Co-location and land rehabilitation options of solar PV power plants	351
4.7.4 Summary table	353
4.8 Social impacts of solar energy	359
4.8.1 Employment and community benefits of solar energy field	359
4.8.2 Negative social impacts linked to land-use changes and global value chains	362
4.8.3 Solutions to mitigate the negative impacts	364
4.9 Summary	364

References	366	
5. Wind Energy	379	
5.1 Introduction	379	
5.2 Components of a modern wind turbine, materials requirements, and the power equation	383	
5.3 Wind resource analysis	390	
5.4 Theoretical limitations for harnessing power from the wind	396	
5.5 Principles of blade design	408	
5.5.1 Airfoil characteristics	408	
5.5.2 Blade element theory	410	
5.5.3 Power coefficient of the rotor	414	
5.5.4 Three blade design examples	416	
5.5.5 Number of blades	432	
5.6 Power control of wind turbines	433	
5.6.1 Fixed speed, fixed pitch (FSFP)	434	
5.6.2 Fixed speed, variable pitch (FSVP)	437	
5.6.3 Variable speed, variable pitch (VSVP)	438	
5.7 Wind power plant design and development	441	
5.7.1 Site selection, turbine siting and land or sea area requirements	441	
5.7.2 Interactions between turbines	446	
5.8 Impacts on nature and mitigation of negative effects	457	
5.8.1 Avoiding and mitigating impacts on nature in wind energy projects	462	
5.8.2 Onshore wind power	464	
5.8.3 Offshore wind power	469	
5.8.4 Summary table	474	
5.9 Social aspects of wind power	478	
5.9.1 Benefits and health impacts for local communities	479	
5.9.2 Recognizing local livelihoods and regional justice	480	
5.9.3 Social acceptance and social license to operate	481	
5.10 Summary	487	
References	490	
6. Bioenergy and Waste	503	
6.1 Introduction	503	
6.2 Net primary production and biomass availability	505	
6.3 Principles of photosynthesis	510	
6.4 Biomass types, sustainable potential, and carbon debt	516	
6.4.1 Forest-based biomass and woody crops	521	
6.4.2 Bioenergy from agricultural crops and residues	534	
6.4.3 Bioenergy crop cultivation on marginal lands	537	
6.4.4 Peat as energy	537	
6.5 Biomass and waste to energy	539	
6.5.1 Mass and energy balances in combustion	539	
6.5.2 Combustion of solid, liquid, and gaseous fuels	549	
6.5.3 Large-scale stationary combustion systems and processes	556	
6.6 Bioenergy Carbon Capture, Storage and Utilization	563	
6.6.1 Bio-chemical production of biofuels and CO ₂ capture	566	
6.6.2 Thermo-chemical production of biofuels and biochemicals and BECCS	568	
6.6.3 BECCS in power and heat production	570	
6.7 Towards sustainable use of biomass	577	
References	580	
7. Energy Storage Systems	587	
7.1 Introduction	587	
7.2. Energy storage as a key component in large-scale energy systems	592	
7.3 Thermal energy storage systems	598	
7.3.1 Seasonal pool storages	600	

7.3.2 Seasonal bore hole thermal storages	606
7.3.3 Steam accumulator	609
7.3.4 Latent phase change energy storage	617
7.4. Mechanical energy storage technologies	624
7.4.1 Solid gravity energy storage systems, SGES	624
7.4.2 Pumped hydro energy storage, PHES	628
7.4.3 Flywheel energy storage, FESS	638
7.4.4 Compressed air energy storage systems, CAES	646
7.5. Electrical and electrochemical energy storages	656
7.5.1 Supercapacitors	656
7.5.2 Battery energy storage systems, BESS	666
7.6. Chemical energy storage	674
7.6.1 Production of green Hydrogen: Water electrolysis	675
7.6.2 Hydrogen logistics	687
7.6.3 Hydrogen storage	689
7.6.4 Energy carriers	689
7.7. Summary	694

Mika Järvinen is a Professor in Aalto University. He is currently the Head of Energy Conversion and Systems research group, and director of Aalto's Hydrogen Innovation Center. His research is focused on different CCS technologies, P2X solutions, and thermal utilization of waste-based materials. Mika is also an enthusiastic teacher on renewable energy technologies and related sustainability aspects.

Hanna Paulomäki is an ecologist who has worked with biodiversity, nature conservation and sustainability questions for twenty years as an expert and in leadership positions in international and national organizations including HELCOM, Oceana, Greenpeace Norden, and the Finnish Nature Panel. She has also been a member of expert groups, such as national IPBES working group. At current she is a doctoral researcher at LUT University studying land use and socio-ecological impacts resulting from renewable energy expansion in Finland.

Chapter authors and reviewers

In addition to external reviewers, all chapters have been internally cross-reviewed by the authors with their best competences.

Chapter 1.

Authors:

Hanna Paulomäki, Aalto University, hanna.paulomaki@lut.fi
Mika Järvinen, Aalto University, mika.jarvinen@aalto.fi

Reviewers:

Toldy Árpád, D.Sc. (Tech.), Aalto University, Finland, arpad.toldy@aalto.fi
Katariina Buure, M.Sc. (Tech.), LUT University, Finland, katariina.buure@lut.fi

Language editor: Chris Stewart, kipstewart@me.com

Chapter 2.

Authors:

Mika Järvinen, Aalto University, mika.jarvinen@aalto.fi
Hanna Paulomäki, Aalto University, hanna.paulomaki@lut.fi
