

PROVERSE INTERACTIVE HAS ACQUIRED NOLWENTURE TO STRENGTHEN IN-HOUSE DEVELOPMENT AND GLOBAL GROWTH

Helsinki and Joensuu, Finland – ProVerse Interactive, a European leader in industrial and dual-use metaverse solutions, has acquired Nolwenture, a Finland-based software development and IT consulting company. The acquisition enhances ProVerse’s in-house technology capabilities, accelerates its global scaling efforts, and deepens its capacity to deliver high-performance digital solutions to both public and private sector clients.

“We’ve had a strong relationship with Nolwenture’s team for years, and since 2023, we’ve successfully collaborated on key projects. As ProVerse grows and tackles increasingly complex global initiatives, acquiring Nolwenture became a strategic move to consolidate our capabilities and support our continued success,” said Kimmo Lönnmark, CEO of ProVerse Interactive. *“I’m pleased to announce that Antti Vikman, founder of Nolwenture, will step into the role of Group CTO, helping integrate our technical operations and recent technology investments into a more cohesive strategy.”*

Through the acquisition, Nolwenture becomes an integral part of ProVerse’s expanding global operations. The combined teams will continue advancing secure, hardware-agnostic digital environments that transform real-world operations into immersive, collaborative ecosystems. The ProVerse platform is designed for mission-critical use and it enables system integration, remote operation, and real-time collaboration through advanced XR interfaces, sensor fusion, and AI-powered analytics.

“Joining ProVerse presents an exciting opportunity for Nolwenture,” said Rob Connell, CEO of Nolwenture. *“Our team is thrilled to contribute to proprietary, in-house innovation at a global scale while continuing to serve our existing client base. For us this move marks a transition from being a software development provider to a true venture-building partner, offering greater value through integrated technology and consulting.”*

About ProVerse Interactive

ProVerse Interactive Oy is a Finnish SME founded in 2023, originating from applied research conducted at Turku University of Applied Sciences. Today, ProVerse offers a secure, technology-independent metaverse platform that integrates real-world data, digital twins, AI analytics, and immersive XR environments into a single adaptive ecosystem. The company’s technology is suitable for dual-use purposes, and its multi-user environment enables, among other things, mission-critical remote control, remote simulation, remote monitoring, and remote training.
