Scanfil plc Changes in management 1 September 2023 at 9.00 a.m. EEST

Scanfil's Board of Directors appoints Christophe Sut as the company's CEO starting today

Christophe Sut starts today as the CEO of Scanfil as the current CEO, Petteri Jokitalo, hands over his duties to him.

"I am grateful and proud to accept the duties of Scanfil CEO. I want to thank Petteri for his successful work for Scanfil. The company has grown into one of Europe's largest Electronic Manufacturing Service companies and Scanfil is known as a successful, flexible and reliable manufacturing partner whose focus is on customers, quality and efficient operations. Based on this, it's good to start building the future together with other Scanfilians", says Christophe Sut.

Prior to joining Scanfil, Christophe Sut worked as the President of the Manufacturing Solutions at Sandvik Group. He has extensive, over twelve years of experience in business development, sales, and marketing in a B2B environment.

"The cooperation with Christophe has started extremely well. Under his leadership, we continue towards the next wave of growth, profitability and internationalization", says Harri Takanen, the Chair of the Board of Directors. "While I would like to warmly welcome Christophe, I would like to thank Petteri for his 15 years of contribution at Scanfil: under his leadership, the company took an immense growth leap and laid the foundation for Scanfil as we know it today".

The departing CEO Petteri Jokitalo will continue as an advisor to the Board of Directors until the end of 2023.

Scanfil in brief

Scanfil is an international manufacturing partner and system supplier for the electronics industry with over 45 years of experience in demanding manufacturing. Scanfil provides its customers with an extensive array of services, ranging from product design to product manufacturing, material procurement and logistics solutions. Vertically integrated production and a comprehensive supply chain are the foundation of Scanfil's competitive advantages: speed, flexibility and reliability.

Typical Scanfil products are modules or integrated products for e.g. self-service application, automation systems, wireless connectivity modules, climate control systems, collection and sorting systems, analyzers and weather solutions. Scanfil services are used by numerous international automation, safety, energy, cleantech and health service providers, as well as companies operating in the field of urbanization. Scanfil's network of factories consists of 9 production units in Europe, Asia and North America. Read more: www.scanfil.com
